

Project Initialization and Planning Phase

Date	15 July 2026
Team ID	SWTID-2026-2658
Project Name	Credit card Approval and Prediction System
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Banks and financial institutions process thousands of credit card applications daily. Manual evaluation is slow, expensive, and susceptible to human bias. There is a need for an automated system that can accurately assess an applicant's eligibility based on personal, financial, employment, and credit history information. This project develops a Machine Learning model that predicts credit card approval decisions, enabling faster processing, consistent evaluations, and improved risk management.
